

# Remote Ops: One-Pager

**Problem:** Truck drivers face life-threatening climate and robbery risks; delays and losses follow.

**Solution:** Satellite-supervised autonomy + remote tele-op + AI risk routing.

**Why Now:** Extreme weather is rising; satellite links are affordable; LLMs can reason about risk.

**OpenAI APIs:** GPT for route advice; Whisper for emergency commands.

**Feasibility:** Digital prototype today; scalable to field pilots with partners.

**Bottom line:** Protect people, keep goods moving.
